DETAILED ACTION

Double Patenting

1. Claim 1 rejected under the judicially created doctrine of double patenting over claims 4 and 6 of U. S. Patent No. 6564798 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: a computerized control unit, expiratory valve, and an inspiratory section.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 rejected under 35 U.S.C. 102(b) as being anticipated by Bird 5165398.

4. Bird teaches a ventilator comprising: an inspiratory unit (col. 3, lines 31-42); an expiratory valve (col. 11, lines 31-33); a control unit for controlling the inspiratory unit and expiratory valve (col. 14, lines 58-62); wherein the control unit controls the

inspiratory unit and expiratory valve to produce elevated basic pressure in a range from 10 to 80 cmH₂O (col. 15, lines 13-15) and to generate the increased breathing rate in a range from 50-200 breaths/minute (col. 10, lines 45-48); and .

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 3, 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bird.

7. Bird teaches the ventilator as claimed in claim 1. It should be noted that Bird fails to teach wherein the control unit controls the inspiratory unit and expiratory valve to generate superimposed breaths at a pressure in a range from 1 to 10 cmH₂O, to set the increased breathing rate as a percentage range between 110% and 1000%, or generating the recruitment phase for a duration in a range between 10 to 100 seconds. However, the ventilator of Bird can be programmed to desired parameters (col. 15, lines 41-42). Therefore the ventilator of Bird is fully capable of performing the claimed limitations.
